

INSTITUTE OF ADVANCED STUDIES IN  
EDUCATION (DEEMED UNIVERSITY)  
GANDHI VIDYA MANDIR,  
SARDARSHHR,  
RAJASTHAN.

*DETAILED SYLLABUS*

*FOR*

*DISTANCE EDUCATION*

**Post-Graduate Degree Programme**

**M. A. - MATHS  
(MASTER OF ARTS- MATHS)**

**(YEARLY SYSTEM)**

**COURSE TITLE : MA Maths**  
**DURATION : 02 YEARS (YEARLY SYSTEM)**  
**TOTAL DEGREE MARKS : 800**

**FIRST YEAR**

<b>COURSE TITLE</b>	<b>Paper Code</b>	<b>MARKS</b>		
		<b>THEORY</b>	<b>PRACTICAL</b>	<b>TOTAL</b>
Topology	MAM-Y110	100	00	100
Complex Analysis	MAM-Y120	100	00	100
Differential Equations	MAM-Y130	100	00	100
Fluid Dynamics	MAM-Y140	100	00	100

**SECOND YEAR**

<b>COURSE TITLE</b>	<b>Paper Code</b>	<b>MARKS</b>		
		<b>THEORY</b>	<b>PRACTICAL</b>	<b>TOTAL</b>
Abstract Algebra	MAM-Y210	100	00	100
Linear Algebra	MAM-Y220	100	00	100
Operations Research	MAM-Y230	100	00	100
Computational Numerical Methods	MAM-Y240	100	00	100

## First Year

<b>Topology</b>	<b>Paper Code: MAM-Y110</b>
-----------------	-----------------------------

**UNIT I :** Metric Space : Definition, examples and basic concepts. Sub-spaces and products. Open sets, Closed sets, Neighbourhoods, first and second countable spaces.

**UNIT II :** Complete metric space, Cantor's intersection theorem, Baire category theorem, Completeness and contracting mappings, Banach fixed point theorem and its application, completion of a metric space, Isometry, Completion theorem.

**UNIT III :** Topological spaces : Definition and basic concepts. Continuous function and Homomorphism of metric spaces and topological spaces, Urysohn's metrization theorem.

**UNIT IV :** Separability, countability axioms, separable spaces, product spaces, Quotient spaces, separation axioms, Urysohn's lemma, Tietze extension theorem.

**UNIT V :** Compactness and local compactness, sequentially compactness and totally boundedness, connectedness and local connectedness. One point compactification of local compact Hausdorff spaces.

Delhi (1995) (Reprint 1997) & John Wiley & Sons, New  
York (1995)
4. James R. Munkres : Topology Prentice Hall of India

**UNIT I :** Geometric representation of complex numbers. Stereographic projections. Analytic function, Cauchy-Riemann equations, Harmonic functions, Elementary functions.

**UNIT II :** Mobius transformation, Isogonal and conformal transformations, Geometrical inversion. The critical point, co-axial circles. Invariance of the cross-ratio, special Mobius transformation:

$$w = z^n, w = \sqrt[n]{z}, w = \tan^2 \left\{ \left( \frac{1}{4} \pi \right) \sqrt[n]{z} \right\}, z = c \sin w.$$

**UNIT III :** Complex integration, Cauchy's theorem and integral formula, Poisson's integral formula, Derivatives of an analytic function, Taylor's theorem, Morera's theorem, Liouville's theorem, Laurent's theorem.

**UNIT IV :** Zeros and singularities, Poles and Zeroes of Meromorphic functions, Rouché's theorem, The maximum modulus principle, Fundamental theorem. Theory of Residues, Analytical continuation.

**UNIT V :** Entire functions-Mittag Leffler's theorem, The Weierstrass factorization theorem, The Jensen and Poisson-Jensen formulas, Hadamard's factorization theorem.

<b>Differential Equations</b>	<b>Paper Code: MAM-Y130</b>
-------------------------------	-----------------------------

**UNIT I :** Total Differential Equations, Series solutions of first and second order linear equations, Integration in series.

**UNIT II :** The method of successive approximations, Picard's existence theorem, Existence and uniqueness of the solution of the equation  $y' = f(x,y)$ . Lipschitz condition. Linear dependence and independence of solutions of linear differential equations. Wronskian.

**UNIT III :** Partial differential equations of the first order, Cauchy's problem for first order equation. Non-linear partial differential equation of first order, Charpit's method, Jacobi's method, Monge's method : Linear partial differential equations with constant coefficients, Equations with variable coefficient, Linear equations of the second order.

**UNIT IV :** Two and three dimensional Laplace, Wave and Diffusion equations, Solution of the boundary value problems by the method of separation of variable.

**UNIT V :** Linear difference equations with constant coefficient, Generating function technique, Matrix methods.

<b>Fluid Dynamics</b>	<b>Paper Code: MAM-Y140</b>
-----------------------	-----------------------------

**UNIT I :** Lagrangian and Eulerian methods, Equation of continuity in fluid motion, Boundary surface, Euler's equation of motion for perfect fluid, Bernoulli's theorem.

**UNIT II :** Two dimensional motion, Irrotational flows, Complex potential for various singularities, Images. Application of conformal mapping. Motion of a circular cylinder, Blasius's theorem.

**UNIT III :** General motion of a fluid element, Stoke's theorem, Kelvin's circulation theorem, Kelvin's minimum energy theorem. Motion of a sphere in an infinite mass of liquid at rest at infinity, Ideal fluid flow around a sphere, concentric sphere (initial motion).

**UNIT IV :** Stress-strain analysis, Constitutive equation, Navier-stokes equations, Buckingham's II- theorem, similitude, Non-dimensional parameters : Froude number, Pressure coefficient, Reynolds number, Grashof number, Prandtl number, Peclet number.

**UNIT V :** Exact solutions : Laminar flow between parallel plates, Hagen-Poiseuille flow through a circular pipe (co-axial circular pipes, elliptic cross section, equilateral triangular section) Laminar flow between concentric rotating cylinders, steady motion of a various fluid due to a slowly rotating sphere, Flow in convergent and divergent channels, unsteady motion of flat plate, flow due to an oscillating flat plate, unsteady flow of viscous incompressible fluid between two parallel plates, Low Reynolds number solution : Flow past a sphere and circular cylinder.

**SECOND YEAR**

<b>Abstract Algebra</b>	<b>Paper Code: MAM-Y210</b>
-------------------------	-----------------------------

**UNIT I :** Commutative rings, sub-rings, ideals. Prime ideals and maximal ideals.

**UNIT II :** Primary decompositions, Rings of fractions. Commutative Noetherian rings.

**UNIT III :** Modules. Chain conditions on modules.

**UNIT IV :** Characteristic of a field, perfect fields, separability of extensions, normal extensions.

**UNIT V :** Finite fields, primitive elements, algebraically closed fields, norms and traces.

**References:**

1. R.Y.Sharp : Steps in Commutative Algebra. Cambridge University Press, 1990.
2. P.J.McCarthy : Algebraic Extension of Fields Chelsea Publishing Company, New York, 1976.

<b>Linear Algebra</b>	<b>Paper Code: MAM-Y220</b>
-----------------------	-----------------------------

**UNIT I :** Vector spaces, Subspaces, Bases, Dimension and coordinates of a vector space.

**UNIT II :** The algebra of linear transformations, Isomorphism. Representation of transformations by matrices, Linear functional, Annihilators, the transpose of a linear transformation.

**UNIT III :** Invariant, Direct cum decomposition, Characteristics values and Characteristics vectors, Diagonalizable operators, The primary decomposition theorem.

**UNIT IV :** Inner product spaces, Linear functional and adjoints, Positive unitary and normal operators. The spectral theorem, Simultaneous diagonalization of normal operators.

**UNIT V :** Bilinear forms, Symmetric bilinear forms, Skew Symmetric bilinear forms.

**References :**

1. K.Hoffman & R.Kunje : Linear Algebra (Ch 2, 3, 6 and 9) Prentice Hall of India.
2. P.R.Halmos : Finite Dimensional Vector Spaces

**Unit I : Inventory :** Inventory models, Probabilistic models, Inventory models with price breaks.

Replacement : Replacement of items that deteriorate problems of choosing between two machines, Replacement of items that fail completely, Problems in mortality and staffing.

**Unit II : Waiting Lines :** Queuing models property of Poisson, exponential and Erlangian processes, Steady state solution of queuing models : M/M/1. General single station queuing model M/M/S and M/E<sub>k</sub>/1, simple numerical problems on these models.

Sequencing : Definition, Processing n jobs through two and three machines. 2 jobs through n machines (graphical method). The Travelling Salesman problem.

**Unit III : Allocation :** Simplex, Assignment and Transportation problems of linear Programming. Computational methods of obtaining their optimal solution. Degeneracy in transportation problems.

**Unit IV : Theory of Games :** Competitive strategies, competitive games, pure and mixed strategies, Rectangular games, Minimax criterion of optimality. Methods for solution of rectangular games and linear programming problem. Minimax theorem, Graphical method.

**Unit V : Dynamic Programming :** Concept of dynamic programming. Problems with a finite number of consecutive decisions, relations between linear programming and dynamic programming. Mathematical formulation of dynamic programming. CPM/PERT techniques.

2. Sasieni, Yaspan, Friedman: Operations Research  
John Wiley & Sons Inc.

<b>Computational Numerical Methods</b>	<b>Paper Code: MAM-Y240</b>
--	-----------------------------

**Unit I :** Computer Arithmetic, Concept of truncation error, Round off error, Error propagation of numerical stability. Curve fitting and principle of least square.

**Unit II :** Solution Of equation, Bisection, Iteration Method, Regula falsi & Newton Raphson method, The Complex Root. Polynomial Interpolation, Difference Schemes, Newton & Hermite Formulae Of Interpolation. InterPolation Using Differences,

**Unit III :** Runge-kutta, Eulars Picards Method, Milen’s Method, Solution By Taylors Series, . Linear Equation, Gauss Elimination Method, LU- Decomposition, Jordan’s & Court’s Method

**Unit IV :** Jacobi Method, Gauss-Sidal Method, Relaxation Method,

Continuous frquency distribution, Graphical Representation, Regression & Regression Analysis.

**Unit V :** Single step and Multi-step method of numerical solution of differnetial equations, Criterian of stability and consistency, convergence of a numerical method, Numerical solutions of Elliptic, Parabolic and Hyperbolic equations by finite difference technique.

Time Series & Test Of Significance, Student ‘t’ Test, Chi- Square test, F-test, Variance Analysis.

Numerical Quadrature & error Estimation, Newton-Cote Formulae, Boole’s Rule, Euler-Maclaurian Rules
